
The Solar System

solar system - wikipedia - the solar system is the gravitationally bound planetary system of the sun and the objects that orbit it, either directly or indirectly. of the objects that orbit the sun directly, the largest are the eight planets, with the remainder being smaller objects, such as the five dwarf planets and small solar system bodies. **overview | our solar system - nasa solar system exploration** - our solar system is a planetary system that orbits a star we call the sun and everything that travels around it — the planets mercury, venus, earth, mars, jupiter, saturn, uranus, and neptune, dozens of moons and millions of asteroids, comets and meteoroids. **solar system test - plain local schools** - solar system test - grade 5 multiple choice directions: identify the choice that best completes the statement or answers the question. write this answer on your answer document. 1. why does the earth experience seasons? a. the earth is tilted on its axis b. the sun is hotter in the spring and summer c. the earth gets less sun in the fall and ... **our solar system - grades k-3 - the university of arizona** - solar system the sun, and the nine planets and their moons that orbit the sun. spacecraft — a vehicle made to travel in the solar system. star sun — a ball of hot, glowing gases. — the star closest to earth. the center of the solar system. a ball of hot, glowing gases which gives earth heat and light. **solar system puzzle kit pdf - nasa** - the solar system puzzle kit allows students to create an eight-cube paper puzzle of the solar system with the enclosed kit. the kit may be duplicated for classroom use. it is also recommended as a take home activity for children and parents. by assembling the puzzle, hand-coloring the bodies of the solar system, and viewing the **moons of the solar system - nasa** - moons orbiting planets in our solar system — this number does not include the moons awaiting official recognition and naming, the eight moons of the dwarf planets, nor the tiny satellites that orbit some asteroids and other celestial objects. of the terrestrial (rocky) planets of the inner solar system, neither **the solar system - hmxearthscience** - the solar system a hydrogen and helium carbon dioxide methane ammonia 1e atmosphere of venus is composed primarily of base your answers to questions 2 through 6 on the diagram below, which shows a portion of the **solar system scale model - stanford solar center** - the scale of our solar system is difficult to imagine when we are standing on what appears to be a large planet looking at an apparently small sun. pictures don't help much. although we could print the planet sizes to scale, the paper would need to be way too large to show the scaled distances. instead, to **lab activity #1: scale model of the solar system** - lab activity on the solar system/why it is warmer at the equator than it is at the poles c-29 questions (to be answered after returning to the lab room) as you answer these questions, think about the proportions of the solar system and the implications of those proportions. 1.
