
Transfer In Reinforcement Learning Domains

transfer in reinforcement learning: a framework and a survey - transfer in reinforcement learning: a framework and a survey alessandro lazarc abstract transfer in reinforcement learning is a novel research area that focuses on the development of methods to transfer knowledge from a set of source tasks to a target task. whenever the tasks are similar, the transferred knowledge can be **successor features for transfer in reinforcement learning** - transfer in reinforcement learning refers to the notion that generalization should occur not only within a task but also across tasks. we propose a transfer frame-work for the scenario where the reward function changes between tasks but the environment's dynamics remain the same. our approach rests on two key ideas: **transfer in reinforcement learning via shared features** - transfer in reinforcement learning via shared features certain conditions (sutton and barto, 1998), policy iteration is guaranteed to converge to an optimal policy π^* that maximizes return from every state. policy iteration is usually performed implicitly: **transfer deep reinforcement learning in 3d environments ...** - transfer deep reinforcement learning in 3d environments: an empirical study devendra singh chaplot school of computer science carnegie mellon university pittsburgh, pa 15213 chaplot@csu guillaume lample school of computer science carnegie mellon university pittsburgh, pa 15213 glample@csu kanthashree mysore sathyendra school of ... **shear transfer in reinforced concrete- recent research** - strength and the reinforcement para-meter pf, in the tests so far discussed the shear transfer reinforcement had a yield strength of about 50 ksi (3500 kgf/ cm2). a group of push-off specimens was therefore tested in which the rein-forcement had a yield strength of 66 ksi (4640 kgf/cm2), to check whether the relationship between v2 and pfy **darla: improving zero-shot transfer in reinforcement learning** - darla: improving zero-shot transfer in reinforcement learning irina higgins* 1 arka pal* 1 andrei rusu1 loic matthey1 christopher burgess1 alexander pritzel1 matthew botvinick1 charles blundell1 alexander lerchner1 abstract domain adaptation is an important open prob- **transfer reinforcement learning with shared dynamics** - transfer reinforcement learning with shared dynamics romain laroche microsoft maluuba 2000 rue peel, montreal qc, canada romainroche@microsoft abstract this article addresses a particular transfer reinforcement learning (rl) problem: when dynamics do not change from one task to another, and only the reward function does. **transfer and multi-task learning** - 1. "forward" transfer: train on one task, transfer to a new task a) just try it and hope for the best b) finetune on the new task c) architectures for transfer: progressive networks d) randomize source task domain 2. multi-task transfer: train on many tasks, transfer to a new task a) model-based reinforcement learning b) model distillation **deep transfer reinforcement learning for text summarization** - this is the rst work that studies transfer learning in text summarization and provides a generic solution that works well on unseen data. keywords: transfer learning, text summarization, self-critic reinforcement learning. 1 introduction text summarization is the process of summarizing a long document into few sentences that capture the **interface shear transfer in reinforced concrete members ...** - transfer of shear forces across concrete-to-concrete interfaces is critical to the strength of many reinforced concrete structures. one common example is the horizontal ... amount of interface reinforcement, and member size. iii in the first phase of the dissertation, it was shown that current code-based ist **maintenance and transfer of self-reinforcement functions*** - maintenance and transfer of self-reinforcement functions 93 development and transfer of dual forms of selfregulation in the experiments discussed thus far animals adopted performance controls on self- feeding but consumed whatever food was available. the present study sought to establish **value-function-based transfer for reinforcement learning ...** - value-function-based transfer for reinforcement learning using structure mapping yaxin liu and peter stone departmentof computer sciences, the university of texas at austin {yxliu,pstone}@cs.utexas abstract transfer learning concerns applying knowledge learned in one task (the source) to improve learning another related task (the target). **autonomous shaping: knowledge transfer in reinforcement ...** - autonomous shaping: knowledge transfer in reinforcement learning (1999) proved that an arbitrary externally specied shap-ing reward function could be included in a reinforcement learning system without modifying its optimal policy, and wiewiora (2003) showed that this is equivalent to using the same shaping function as a non-uniform initial ... **cross-domain transfer for reinforcement learning** - cross-domain transfer for reinforcement learning ing the average episode length. the players in our exper-iments are based on version 0.6 of the benchmark players distributed by ut austin (stone et al., 2006) and freely-available soccer server version 9.4.5. **grounding language for transfer in deep reinforcement learning** - grounding language for transfer in deep reinforcement learning 2.3 using task features for transfer the idea of using task features/dictionaries for zero-shot generalization has been explored previ-ously in the context of image classification.
