## Variant Configuration Sap Blumöhr Uwe Münch

**variant configuration (lo-vc) - home: consolut** - sap ag variant configuration (lo-vc) variant configuration (lo-vc) april 2001 9 variant configuration (lo-vc) purpose variant configuration is for manufacturing complex products. the manufacturer is always having to offer new variants of its products. often, new variants are created by modifying existing product designs as you process the order. **sap me how-to-guide for variant configuration** - the sap me how-to-guide for variant configuration is intended to provide sufficient information to describe the setup, flow and processing of a configurable material, bom and routing and production orders sent from erp to me. 1.2 scope **sap s/4hana for advanced variant configuration** - 6 dependency processing the avc engine has been designed to compute the set of possible user choices far more accurately than lo-vc. the fundamental problem is the following: if the user gets to choose a value on the ui, which is not **manage dependencies and variant configuration reliably** - the company uses sap erp variant configuration. however, to enter an order, a sales employee must first check the manual to find out which variants are possible. this becomes even more difficult when individual cases allow different combinations and prices. variant configuration could eliminate the manual. companies are often unwilling to take **make-to-order production with variant configuration** - make-to-order production with variant configuration the scenario demonstrates sales order processing with materials with pre-selected characteristic values (material variants) and components that are produced according to sales quantities planned for these variants. if the sales order configuration is not available as a material variant, **class item: k of bom in variant configuration - sap** - the client expects to implement variant configuration by maintaining minimum amount of dependency data. and they expect to have this though sap best practices. to implement the variant, it requires maintaining dependencies particularly for selecting the component from bom. dependency type "selection condition" is **constraint solving with advanced variant configuration** - constraint solving with advanced variant configuration • introduction into avc constraint solving • constraint solving example • implicit constraints - examples ... product owner advanced variant configuration engine andreas.koelbl@sap thank you. title: title goes here and here and here author: sap se **sbn - plm webmeeting sap s/4hana for advanced variant ...** - sap s/4hana advanced variant configuration sap s/4hana for advanced variant configuration provides an efficient set of enhanced capabilities to define, develop, sell, manufacture, deliver, and maintain individualized products key advantages / values: • efficient configuration of sales orders & more efficient modeling **methods of selecting bom variant parts in variant ... - sap** - methods of selecting bom variant parts in variant configuration . overview . this document explains in detail about the three ways of selecting variant parts in the bill of material (bom) of a configurable material. options available in standard sap are given below.
