calculus of variations - university of arizona - calculus of variations 3 $t(y) = z b x=0 dt$ now using $v = ds dt$ and rearranging we achieve $= z b x=0 ds v$. finally using the formula $v^2 = 2gy$ we obtain $z b 0 s 1+(y)^2 2gy dx$. thus to find the smallest possible time taken we need to find the extremal function. **the calculus of variations** - the calculus of variations is concerned with solving extremal problems for a functional. that is to say maximum and minimum problems for functions whose domain contains functions, $y(x)$ (or $y(x_1; \dots; x_n)$), or n -tuples of functions). the range of the functional will be the real numbers, r **variations in chromosome structure & function** - variations in chromosome structure: duplications! an example is the drosophila eye shape allele, bar, that reduces the number of eye facets, giving the eye a slit-like rather than oval appearance!
